Re-scan for matches

inventory_fact.product_id → product_master.product_id

15 of 15 distinct values in product_master.product_id also appear in inventory_fact.product_id (100% overlap).

99% confidence 100% overlap · 15 shared suggested

Confirm Reject

sales_fact.consumer_id → consumer_master.consumer_id

12 of 12 distinct values in consumer_master.consumer_id also appear in sales_fact.consumer_id (100% overlap).

99% confidence 100% overlap · 12 shared suggested

Confirm Reject

consumer_master.city → store_master.city

4 of 4 distinct values in consumer_master.city also appear in store_master.city (100% overlap).

99% confidence 100% overlap · 4 shared suggested

Confirm Reject

sales_fact.date_id → date_master.date_id

90 of 90 distinct values in date_master.date_id also appear in sales_fact.date_id (100% overlap).

99% confidence 100% overlap · 90 shared suggested

Confirm Reject

inventory_fact.date_id → date_master.date_id

30 of 30 distinct values in inventory_fact.date_id also appear in date_master.date_id (100% overlap).

99% confidence 100% overlap · 30 shared suggested

Confirm Reject

sales_fact.promo_id → promotion_master.promo_id

7 of 7 distinct values in promotion_master.promo_id also appear in sales_fact.promo_id (100% overlap).

99% confidence 100% overlap · 7 shared suggested

Confirm Reject

sales_fact.store_id → store_master.store_id

5 of 5 distinct values in store_master.store_id also appear in sales_fact.store_id (100% overlap).

99% confidence 100% overlap · 5 shared suggested

Confirm Reject

inventory_fact.store_id → store_master.store_id

5 of 5 distinct values in store_master.store_id also appear in inventory_fact.store_id (100% overlap).

Confirm Reject

Ontology

Upload a data dictionary or domain description in plain English. GraphLoom extracts concepts and maps them onto known tables and columns.

Product: The sellable item sold in stores. Maps to table product_master.
Consumer: A loyalty shopper or household. Maps to table consumer_master.
Date: Calendar spine used for sales and promotions. Maps to table date_master.
Promotion: Time-bounded offer applied to baskets. Maps to table promotion_master.
Store: Physical or express retail location. Maps to table store_master.
Sales: Transactional fact linking product, consumer, date, store, and optional promo.
product_id links sales to product
consumer_id connects sales to consumer
promo_id relates sales to promotion
